The prevalence, age of onset, and symptomatology of many neuropsychiatric conditions differ between males and females. To understand the causes and consequences of sex differences it is important to establish where they occur in the human brain.

In econometrics and statistics, a structural break is an unexpected change over time in the parameters of regression models, which can lead to huge forecasting errors and unreliability of the model in general. This issue was popularised by David Hendry, who argued that lack of stability of coefficients frequently caused forecast failure, and therefore we must routinely test for structural ...

Structural variation (also genomic structural variation) is the variation in structure of an organism's chromosome. It consists of many kinds of variation in the genome of one species, and usually includes microscopic and submicroscopic types, such as deletions, duplications, copy-number variants, insertions, inversions and translocations. Originally, a structure variation affects a sequence ...

In *M. tuberculosis*, which causes human tuberculosis, both DAC and c-di-AMP-specific PDE were identified. MtdisA (also referred as DacA) is able to utilize both ATP and ADP to synthesize c-di-AMP []. Moreover, the DAC activity of MtdisA is allosterically regulated by high concentration of ATP []. These findings provide new insights into the substrates and the catalytic mechanism of DACs.

Conventional Resin-Transfer-Molding (RTM) is a resin-infusion process, which is established in industry for many decades. The process is suitable to manufacture structural applications mainly for the aerospace industry as well as for niche applications such as luxury and sport cars with a limited number of total vehicles being produced.

Volume 14, No. 1, Art. 25 – January 2013 . Theory Building in Qualitative Research: Reconsidering the Problem of Induction . Pedro F. Bendassolli. Abstract: The problem of induction refers to the difficulties involved in the process of justifying experience-based scientific conclusions. More specifically, inductive reasoning assumes a leap from singular observational statements to general ...

LISTEN NOW. Richard Marais (Cancer Research UK Manchester Institute, UK) finds that circulating cell-free DNA is a surrogate marker of tumour burden in patients with metastatic melanoma. He tells Helen Saul that a simple blood test could predict overall survival.. Plasma total cell-free DNA (cfDNA) is a surrogate biomarker for tumour burden and a prognostic biomarker for survival in metastatic ...

How does LCA work? LCA supposes a simple parametric model and uses observed data to estimate parameter values for the model. The model parameters are: (1) the prevalence of each of C case subpopulations or latent classes (they are called 'latent' because a case's class membership is not directly observed); and (2) conditional response probabilities--i.e., the probabilities, for each ...
