In mathematics, an inequality is a relation that holds between two values when they are different (see also: equality).. The notation $a \neq b$ means that a is not equal to b .; It does not say that one is greater than the other, or even that they can be compared in size. If the values in question are elements of an ordered set, such as the integers or the real numbers, they can be compared in size.

The principle of The Three Pillars of Sustainability says that for the complete sustainability problem to be solved all three pillars of sustainability must be sustainable. The three pillars are social, environmental, and economic sustainability. The flaw in the Brundtland definition of sustainability arose in a short term effort to make the social pillar stronger as the world's top priority.

This post will be the first of a two-part series on gender inequality in the United States. Gender inequality is defined as the disparity in status, power and prestige between people who identify as women and men. Today I will look at how gender inequality still exists in the United States, despite our frequent unwillingness to acknowledge it.

An example of a low leverage point would be pushing on the side of a ship to change its course. This would require a large amount of force to have the intended effect. But if the high leverage point of pushing on the rudder is used instead, it takes only a small amount of force to achieve the same effect.. Easy problems can be solved by pushing on low leverage points.
