Here is a set of practice problems to accompany the Area Between Curves section of the Applications of Integrals chapter of the notes for Paul Dawkins Calculus I course at Lamar University.

Calculus I - Area Between Curves (Practice Problems)

In general, calculating the surface area of a pyramid requires finding the sum of the areas of the base and the triangular sides. The lateral area is given by where s is the slant height of a triangular side and P is the perimeter of the base. Remember that this is only true because we are assuming that the triangular sides are congruent; that is, we are working with a regular pyramid.

Surface irrigation is where water is applied and distributed over the soil surface by gravity. It is by far the most common form of irrigation throughout the world and has been practiced in many areas virtually unchanged for thousands of years.. Surface irrigation is often referred to as flood irrigation, implying that the water distribution is uncontrolled and therefore, inherently inefficient.

Environmental effects. Impervious surfaces are an environmental concern because, with their construction, a chain of events is initiated that modifies urban air and water resources: . The pavement materials seal the soil surface, eliminating rainwater infiltration and natural groundwater recharge. From a recent article in the Seattle Times: "While urban areas cover only 3 percent of the U.S ...
