Salvia Divinorum or Diviner's sage originates exclusively from the Mazatec and Aztec peoples of Mexico, where they have cultivated the plant for the last 1,500 years or longer. As a cultigen, the sage has nearly lost its normal ability to grow from seed and now depends mostly upon humans for reproduction.

SOIL PROFILE. The ground is modified and enriched by the plants growing on it. Making a section of soil (figure 4), you can observe different layers: a layer rich in organic matter, the humus (O); a layer rich in roots and living organisms (A); a layer less rich in life, but still used by roots (B) and an inert soil (C).

Everglades National Park Essay - 1596 Words

The Theory of Island Biogeography is a 1967 book by Robert MacArthur and Edward O. Wilson. It is widely regarded as a seminal piece in island biogeography and ecology. The Princeton University Press reprinted the book in 2001 as a part of the "Princeton Landmarks in Biology" series. The book popularized the theory that insular biota maintain a dynamic equilibrium between immigration and

Biology is subdivided into separate branches for convenience of study, though all the subdivisions are interrelated by basic principles. Thus, while it is custom to separate the study of plants from that of animals (), and the study of the structure of organisms from that of function (), all living things share in common certain biological phenomena—for example, various means of reproduction ...
