A classic, extensively studied nonlinear problem is the dynamics of a pendulum under the influence of gravity. Using Lagrangian mechanics, it may be shown that the motion of a pendulum can be described by the dimensionless nonlinear equation  $\ddot{\theta} + \sin \theta = 0$  where gravity points "downwards" and is the angle the pendulum forms with its rest position, as shown in the figure at right.

A dynamical system is a manifold  $M$  called the phase (or state) space endowed with a family of smooth evolution functions  $\Phi_t$  that for any element of  $t \in T$ , the time, map a point of the phase space back into the phase space. The notion of smoothness changes with applications and the type of manifold. There are several choices for the set  $T$ . When  $T$  is taken to be the reals, the dynamical ...
