An atom is the smallest constituent unit of ordinary matter that has the properties of a chemical element. Every solid, liquid, gas, and plasma is composed of neutral or ionized atoms. Atoms are extremely small; typical sizes are around 100 picometers (a ten-billionth of a meter, in the short scale). Atoms are small enough that attempting to predict their behavior using classical physics – as ...

"I am writing biography, not history, and the truth is that the most brilliant exploits often tell us nothing of the virtues or vices of the men who performed them, while on the other hand a chance remark or a joke may reveal far more of a man's character than the mere feat of winning battles in which thousands fall, or of marshalling great armies, or laying siege to cities."

Zero-point energy (ZPE) is the difference between the lowest possible energy that a quantum mechanical system may have, and the classical minimum energy of the system. Unlike in classical mechanics, quantum systems constantly fluctuate in their lowest energy state due to the Heisenberg uncertainty principle. As well as atoms and molecules, the empty space of the vacuum has these properties.
