Since 0 and $x = 1$ both satisfy the differential equation they are also solutions. The solution $x = 1$ corresponds to $k = 0$, however, $x = 0$ is not included in the general solution for any finite k . Hence the solutions are $x = 1$ and $x = 0$. 1- ket 21.

We obtained a particular solution by substituting known values for x and y . These known conditions are called boundary conditions (or initial conditions). It is the same concept when solving differential equations - find general solution first, then substitute given numbers to find particular solutions.

1.2. SAMPLE APPLICATION OF DIFFERENTIAL EQUATIONS 3 Sometimes in attempting to solve a de, we might perform an irreversible step. This might introduce extra solutions. If we can get a short list which contains all solutions, we can then test out each one and throw out the invalid ones. The ultimate test is this: does it satisfy the equation?
