Slinky, meter stick, pencil Purpose: The purpose of the lab is to study the types of waves and their properties using a slinky. Procedure: 1. Select a lab partner and gather the lab materials. 2. On a smooth floor, stretch the slinky out between you and your partner, to a length of about four meters. (Caution - Do not over stretch the slinky!) 3.

Slinky and the Wave Lab Transverse Waves: With a partner, find a spot on the floor and make a straight line about 1.5 meters long on the floor with a piece of tape. This is the line of equilibrium. Stretch out your slinky along this line. Place a piece of masking tape at about the middle of the slinky.

Slinky and the Wave Lab - An NSF MRSEC

Two day lab dealing with transverse and longitudinal waves using a slinky. Students observe Amplitude, Wavelength, Crest, and Trough and draw where these are in the wave. Constructive & Destructive interference. Five page lab with great questions Comes with answer key.

Has anyone here ever done the slinky science experiment? if so, could you help me out by answering these questions...please I don't have a slinky and I need this lab done by morning. 1.At what point is the kinetic energy of the slinky the greatest? 2. When is the potential energy of the slinky the greatest? 3. What variables must be adjusted so the slinky walks down the entire flight of stairs?

The Slinky Lab Interactive is shown in the iFrame below. There is a small hot spot in the top-left corner. Clicking/tapping the hot spot opens the Interactive in full-screen mode. Use the Escape key on a keyboard (or comparable method) to exit from full-screen mode. There is a second hot-spot in the lower-right corner of the iFrame.

This mobile-ready Slinky simulation offers a host of ways to explore vibrations and waves. It provides multiple tools for investigating how frequency, tension, and density affect the vibrational motion of particles and the speed of a transverse wave as it moves through a medium.

The Physics Classroom: Slinky Lab - compadre.org

The Slinky Lab Interactive provides the user with a virtual slinky. The slinky consists of a collection of dots to represent its coils. Any individual dot can be grabbed at one location and shook back and forth to create vibrations. The vibrations travel through the slinky from the location where it is shook to the ends and then back.

Physics Experimenting with Slinky Springs Enoch Lau 11Ph1 Page 1 of 12 EXPERIMENTING WITH SLINKY SPRINGS: INVESTIGATION 1 Aim: To measure the velocity of a pulse (transverse) travelling through a slinky spring Context: To calculate velocity, we can use: $\text{velocity} = \frac{\text{distance}}{\text{time}}$ or $v = \frac{s}{t}$. We are also assuming that the pulse will reflect back and at the

Obtain a timer for this part of the lab. Time how long it takes one pulse to go from one end of the slinky to the other. While remaining at the same distance from your partner, make the slinky more stretched out. To do this, gather more of the slinky in your hand, so that the distance between the coils of the slinky is greater.

Lab: Slinkies and Waves - Triton Science

Slinky Wave Lab Background A wave can be described as an energy disturbance that travels through a medium from one location to another. Waves, simply put, are energy moving from one place to another. As the wave moves through the medium (water, slinky, air), energy is being

passed from one particle to the next. Waves occur around us every day.
