General relativity (GR, also known as the general theory of relativity or GTR) is the geometric theory of gravitation published by Albert Einstein in 1915 and the current description of gravitation in modern physics. General relativity generalizes special relativity and supersedes Newton's law of universal gravitation, providing a unified description of gravity as a geometric property of space ...

Tests of general relativity serve to establish observational evidence for the theory of general relativity. The first three tests, proposed by Einstein in 1915, concerned the "anomalous" precession of the perihelion of Mercury, the bending of light in gravitational fields, and the gravitational redshift. The precession of Mercury was already known; experiments showing light bending in line with ...

Remarquons que cette expression peut être positive, négative ou nulle (même pour deux points différents). Ici «  $c$  » est un facteur constant correspondant à une vitesse pour obtenir une équation homogène. Nous savons que c'est la vitesse de la lumière, l'important pourtant n'étant pas que les photons voyagent à la vitesse de la lumière mais qu'il y ait un invariant de ce type.

In general relativity, gravitational forces between two massive bodies like planets or stars are due to the curvature of spacetime, which itself is caused by the presence of massive bodies. Gravitational waves are propagating disturbances in the curvature of spacetime, caused by some of the most violent and energetic physical processes in the universe.

With the new Star Trek out, it's long past time (as it were) that we laid out the rules for would-be fictional time-travelers. (Spoiler: Spock travels to the past and gets a sex change and becomes Kirk's grandfather lover.\*) Not that we expect these rules to be obeyed; the dramatic demands of a work of fiction will always trump the desire to get things scientifically accurate, and Star ...
