Phase Changes of States of Matter. Gases: Gases can ionize into plasma, condense into liquids, or undergo deposition into solids. Gases form from sublimation of solids, vaporization of liquids, and recombination of plasma. Plasma: Plasma can recombine to form a gas. Plasma most often forms from ionization of a gas,...

Changing States of Matter. To create a solid, you might have to decrease the temperature by a huge amount and then add pressure. For example, oxygen (O_2) will solidify at -361.8 degrees Fahrenheit (-218.8 degrees Celsius) at standard pressure. However, it will freeze at warmer temperatures when the pressure is increased.

Changes in states. The states of matter are solid, liquid, gas and plasma. Since there is some debate on whether plasma should be classified as a state of matter and since it is not commonly experienced, we will not discuss its properties here. When heat is applied to a material, its change in state typically goes from solid to liquid to gas.
