The Architecture Of Open Source

Open architecture is a type of computer architecture or software architecture intended to make adding, upgrading, and swapping components easy. For example, the IBM PC, Amiga 500 and Apple IIe have an open architecture supporting plug-in cards, whereas the Apple IIc computer has a closed architecture. Open architecture systems may use a standardized system bus such as S-100, PCI or ISA or they ...

This chapter discusses some of the design decisions that shaped LLVM 1, an umbrella project that hosts and develops a set of close-knit low-level toolchain components (e.g., assemblers, compilers, debuggers, etc.), which are designed to be compatible with existing tools typically used on Unix systems. The name "LLVM" was once an acronym, but is now just a brand for the umbrella project.
