which new fibers can be formed. First, large fibers can split into two or more smaller fibers (i.e., fiber splitting) [8, 10, 32, 34].]. And perhaps the primary mechanism is via the activation and proliferation of satellite cells [18-20, 23, 52, 53].]. Satellite cells are myogenic stem cells which are involved in skeletal muscle regeneration.

I wonder if so many women would "choose" hysterectomy if they knew how it would affect their figure and internal anatomy. I know I would have told my once respected gynecologist "no way" and left never to return if I'd known just a smidgen of what I now know. Here are some of the anatomical and skeletal changes that occur post hysterectomy.
