In mathematics, an inequality is a relation that holds between two values when they are different (see also: equality).. The notation  $a \neq b$  means that  $a$  is not equal to  $b$ .; It does not say that one is greater than the other, or even that they can be compared in size. If the values in question are elements of an ordered set, such as the integers or the real numbers, they can be compared in size.

The OECD has published three major reports on inequality. The first, Growing Unequal?(OECD 2008), documents the long-term trend of rising income inequality in advanced and emerging countries; the second (Divided We Stand, OECD 2011) explores the underlying reasons for this phenomenon, including technological change and globalization; and the third (In It Together, OECD 2015a) examines the role ...

The principle of The Three Pillars of Sustainability says that for the complete sustainability problem to be solved all three pillars of sustainability must be sustainable. The three pillars are social, environmental, and economic sustainability. The flaw in the Brundtland definition of sustainability arose in a short term effort to make the social pillar stronger as the world's top priority.

Section 3-5 : Lagrange Multipliers. In the previous section we optimized (i.e. found the absolute extrema) a function on a region that contained its boundary. Finding potential optimal points in the interior of the region isn't too bad in general, all that we needed to do was find the critical points and plug them into the function.
