A bushing or rubber bushing is a type of vibration isolator. It provides an interface between two parts, damping the energy transmitted through the bushing. A common application is in vehicle suspension systems, where a bushing made of rubber (or, more often, synthetic rubber or polyurethane) separates the faces of two metal objects while allowing a certain amount of movement.

Real-time vibration monitoring visualizes changes to equipment's low-frequency vibration levels and identifies changes when they occur. The vibration monitoring system provides alerts when vibrations go outside of the normal range and streams condition-based data to central operations through a web-hosted platform via WiFi communication.

Therefore, if you're building a school, just remember that every 1,000 sf will need about 4 tons of air conditioning. Of course, you need to remember that this rough sizing varies by the amount of insulation, the amount and orientation of glazing, the amount of exterior wall and the climate.
