Contact mechanics is the study of the deformation of solids that touch each other at one or more points. A central distinction in contact mechanics is between stresses acting perpendicular to the contacting bodies' surfaces (known as the normal direction) and frictional stresses acting tangentially between the surfaces. This page focuses mainly on the normal direction, i.e. on frictionless ...

The Gödel metric is an exact solution of the Einstein field equations in which the stress-energy tensor contains two terms, the first representing the matter density of a homogeneous distribution of swirling dust particles (dust solution), and the second associated with a nonzero cosmological constant (see Λ -vacuum solution). It is also known as the Gödel solution or Gödel universe.

Water table Perched water table Where the ground contains layers of permeable soil (e.g. sands) interspersed with layers of much lower permeability (e.g. clays) one or more perched water tables may develop and the overall distribution of pore pressure with depth may not be exclusively linear. Detection of perched water tables during site investigation is important, otherwise erroneous ...

Is time an observable? or is it a mere parameter? I've just put my long paper "Time dispersion and quantum mechanics" up on the physics archive. If you are here, it is very possibly because you have at one point or another talked with me about some of the ideas in this paper and asked to see the paper when it was done.

Overview. Fracture mechanics is a methodology that is used to predict and diagnose failure of a part with an existing crack or flaw. The presence of a crack in a part magnifies the stress in the vicinity of the crack and may result in failure prior to that predicted using traditional strength-of-materials methods.. The traditional approach to the design and analysis of a part is to use ...

KINEMATICS Kin ematics is one of the two branches of mechanics. It deals with the motion of particles not the causes of the motion. Motion in one dimension in other words linear motion and projectile motion are the subtitles of kinematics they are also called as 1D and 2D kinematics. Some mathematical symbols, equations and graphics will be used to show the relations of basic concepts.
