Introduction. A 2008 publication described concurrent engineering as a new design management system that has matured in recent years to become a well-defined systems approach to optimizing design and engineering cycles. Concurrent engineering has been implemented in a number of companies, organizations, and universities, most notably in the aerospace industry.

Hazard analysis and critical control points, or HACCP (/ ˈ h æ s ɹ ɹ ɹ / [citation needed]), is a systematic preventive approach to food safety from biological, chemical, and physical hazards in production processes that can cause the finished product to be unsafe and designs measures to reduce these risks to a safe level. In this manner, HACCP attempts to avoid hazards rather than attempting ...

Artificial intelligence - Expert systems: Expert systems occupy a type of microworld—for example, a model of a ship's hold and its cargo—that is self-contained and relatively uncomplicated. For such AI systems every effort is made to incorporate all the information about some narrow field that an expert (or group of experts) would know, so that a good expert system can often outperform ...

The ANN for these experiments was implemented using the MATLAB (2016b) Neural Network Toolbox []. The optimal structure of the ANN was found through a grid search process, with the best structure (in terms of classification accuracy) for the ANN found to be a multi-layer perceptron (MLP) with two hidden layers of 30 hidden neurons each.

In this paper, we review articles pertaining to global supply chain design and focus on the logistics of the supply chain, i.e., the movement of goods from the point of origin to the point of consumption (Vitasek, 2003). Fig. 1 illustrates alternative production locations for a global supply chain, depicting manufacturing activities for an end-product and for multiple tiers of components.
