### **Solution And Suspension Difference**

The key difference between solution and suspension is that the particles of a solution are invisible to the naked eye whereas the particles of the suspension are visible.. In the natural environment, most of the substances exist as mixtures (E.g. air, water). In a mixture, there are two or more substances, but they do not join with each other by chemical means.

### **Colloidal Solution, True Solution and Suspension ...**

Chemistry A mixture in which particles of one or more substances (the solute) are distributed uniformly throughout another substance (the solvent), so that the mixture is homogeneous at the molecular or ionic level. The particles in a solution are smaller than those in either a colloid or a suspension. Compare colloid suspension.

A solid solution is a solid-state solution of one or more solutes in a solvent. Such a multi-component system is considered a solution rather than a compound when the crystal structure of the solvent remains unchanged by addition of the solutes, and when the chemical components remain in a single homogeneous phase. This often happens when the two elements (generally metals) involved are close ...

Colloid definition, a substance made up of a system of particles with linear dimensions in the range of about  $10^{-7}$  to  $5 \times 10^{-5}$  cm dispersed in a continuous gaseous, liquid, or solid medium whose properties depend on the large specific surface area. The particles can be large molecules like proteins, or solid, liquid, or gaseous aggregates and they remain dispersed indefinitely.

In chemistry, an ideal solution or ideal mixture is a solution with thermodynamic properties analogous to those of a mixture of ideal gases. The enthalpy of mixing is zero as is the volume change on mixing by definition; the closer to zero the enthalpy of mixing is, the more "ideal" the behaviour of the solution becomes. The vapor pressure of the solution obeys Raoult's law, and the activity ...
