A Pigovian tax (also spelled Pigouvian tax) is a tax on any market activity that generates negative externalities (costs not included in the market price). The tax is intended to correct an undesirable or inefficient market outcome, and does so by being set equal to the social cost of the negative externalities. In the presence of negative externalities, the social cost of a market activity is ...

An example of a low leverage point would be pushing on the side of a ship to change its course.

This would require a large amount of force to have the intended effect. But if the high leverage point of pushing on the rudder is used instead, it takes only a small amount of force to achieve the same effect.. Easy problems can be solved by pushing on low leverage points.
