Chemical thermodynamics is the study of the interrelation of heat and work with chemical reactions or with physical changes of state within the confines of the laws of thermodynamics. Chemical thermodynamics involves not only laboratory measurements of various thermodynamic properties, but also the application of mathematical methods to the study of chemical questions and the spontaneity of ...

In thermodynamics the entropy of mixing is the increase in the total entropy when several initially separate systems of different composition, each in a thermodynamic state of internal equilibrium, are mixed without chemical reaction by the thermodynamic operation of removal of impermeable partition(s) between them, followed by a time for establishment of a new thermodynamic state of internal ...

Tensile strength of rock is among the most important parameters influencing rock deformability, rock crushing and blasting results. To calculate the tensile strength from the indirect tensile (Brazilian) test, one must know the principal tensile stress, in particular at the rock disc center, where a crack initiates.

On peut définir la thermodynamique de deux façons simples : la science de la chaleur et des machines thermiques ou la science des grands systèmes en équilibre. La première définition est aussi la première dans l'histoire. La seconde est venue ensuite, grâce aux travaux pionniers de Ludwig Boltzmann.. Avec la physique statistique, dont elle est désormais une partie, la thermodynamique ...
