The ultraviolet catastrophe, also called the Rayleigh-Jeans catastrophe, was the prediction of late 19th century/early 20th century classical physics that an ideal black body (also blackbody) at thermal equilibrium will emit radiation in all frequency ranges, emitting more energy as the frequency increases. By calculating the total amount of radiated energy (i.e., the sum of emissions in all ...

Historique. L'histoire de l'antiparticule commence au tournant des années 1930 [1].. Paul Dirac a prédit en 1928 l'existence de ces particules en étudiant l'électron. Il formule la description du comportement des particules par son équation qui ne fixe que le carré de certaines grandeurs. Cette équation a donc deux solutions : la solution « ordinaire », correspondant au comportement ...
