ersity Index Lab The measure of the biodiversity of organisms in a given area is known as the diversity index. The diversity index values will vary between 0, which would indicate no diversity, and 1, which is very diverse. Any values above 0.5 usually indicate a relatively diverse population. For example,

### **Diversity Index Lab - OpenStudy**

Simpson's Diversity Index is a measure of diversity. In ecology, it is often used to quantify the biodiversity of a habitat. It takes into account the number of species present, as well as the abundance of each species. Before looking at Simpson's Diversity Index in more detail, it is important to understand the basic concepts.

Be sure to complete all calculations, show work, and answer all questions on the lab worksheet. Exercise 1: Practice calculating diversity with diversity indices. Background: Imagine a section of marsh that contains 43 species of plants. In terms of numbers of species, it is more diverse than a neighboring section that contains only 26 species.

### **Quantifying Biodiversity - University of Delaware**

Relationships and Biodiversity Lab Practice Quiz Answers. 1. The reason for the common characteristics shared by the plants in this lab is the fact that the plants had a great deal of DNA which was the same as that of the common ancestor, so this coded for similar enzymes and proteins (and hence structures) in each of these plants.
