Some data analysis techniques are not robust to missingness, and require to "fill in", or impute the missing data. Rubin (1987) argued that repeating imputation even a few times (5 or less) enormously improves the quality of estimation. For many practical purposes, 2 or 3 imputations capture most of the relative efficiency that could be captured with a larger number of imputations.

Missing data - Wikipedia

From the responses we can safely conclude that the most important aspect before the buy is done with regard to the impact it has on health. Here, the customer is satisfied, but there is scope for conveying clearly that there are no side-effects of using Red Bull.
