Preparing the Acid Solution. Like many natural plant products, tannic acid is a mixture of polymers, which means that a uniform formula for tannic acid does not exist and that the composition can vary among available brands. As with any concentrated chemical, tannic acid poses a potential health hazard.

Product Information Bulletin. Tannic acid is a basic component in the chemical staining of wood. Tannin is already present in woods like Cherry, Oak, Walnut, and Mahogany. Tannin solutions can be applied to woods low in tannin content so stain chemicals that require tannin to react will produce the desired effect. Directions: To make...

Dry Powdered Tannin -- Tannic Acid

General description. Tannic acid (TA) is a natural, non-toxic organic acid with corrosion inhibitive property for metals and alloys. A chemiluminescence (CL) system of KIO₄ (potassium periodate)-H₂O₂ (hydrogen peroxide)-Tween40 has been employed in the detection of tannic acid in industrial wastewater.

Tannic Acid is a basic ingredient in the chemical staining of wood. The tannic acid or tannin is already present in woods like oak, walnut, and mahogany. Tannic acid can be applied to woods low in tannin so chemical stains that require tannin content will react.

Tannic Acid in Wood Finishing

Take 1 g of tannic acid free of solvent or with known residual solvent content in a sample vial, add 5 µl of the standard solution and seal it quickly with a septum. Set the sample vial in a pre-conditioned gas chromatograph and start the analysis under the following conditions and obtain standard curves for each solvent.

Tannic Acid - Food and Agriculture Organization

If you want to make a hand/food soak, a mild solution is best, about 10% of tannic acid to about 90% water. To achieve this you can prepare a bowl with plain old tea bags. It depends on how much water you use, but you can gauge the soak-time of the tea by the color of the water.

A solution of 5 ppm of tannic acid (molecular weight 322) has a molality of 1.5X10⁻⁵. At pH 2, in the presence of 5 ppm of tannic acid, all the iron in the solution is converted to the ferrous form in 30 days. At pH 3, the reaction is slower, but it seems nearly completed after 30 days.

Complexes of Ferrous Iron With Tannic Acid - USGS

Tannic acid. Historically, the term has applied to many compounds and plant extracts able to render skin COLLAGEN impervious to degradation. The word tannin derives from the Celtic word for OAK TREE which was used for leather processing. TANNIC ACID is a light yellow to tan solid with a faint odor. Sinks and mixes with water.
