Solve Inequality And Graph Solution

If one point of a half-plane is in the solution set of a linear inequality, then all points in that half-plane are in the solution set. This gives us a convenient method for graphing linear inequalities. To graph a linear inequality 1. Replace the inequality symbol with an equal sign and graph the resulting line. 2.

Solving Polynomial Inequalities. Solving more complicated polynomial inequalities is not so straightforward. For example, solve the inequality below for x . Solution: If the above had been an equation, finding the roots by factoring or completing the square would be all that's necessary. However, inequalities are different.

Solve each inequality. Check your solution, and then graph it on a number line. $c + 62/87, 21$ The solution set is $\{c \mid c \geq 3.7\}$. To check substitute three different values into the original inequality: 3.7, a number less than 3.7, and a number greater than 3.7. \forall The inequality is true when c is equal to or greater

Solve each inequality. Then graph the solution

A compound inequality contains at least two inequalities that are separated by either "and" or "or". The graph of a compound inequality with an "and" represents the intersection of the graph of the inequalities. A number is a solution to the compound inequality if the number is a solution to both inequalities.
