Materials and Methods. Eleven TNBC cell lines were evaluated using array comparative genomic hybridization. A copy number gain was defined as an array comparative genomic hybridization log₂ ratio of ≥ 1 . Cell surface expression of programmed cell death ligand 1 (PD-L1) was detected using flow cytometry and compared with the median fluorescence intensity of isotype control immunoglobulin.

(c) Enzymes remain unaltered at the end of a reaction. Once the reaction is brought about, enzymes are ready for another sequence of reactions. (d) Majority of the enzymes are capable of bringing about reversible reactions depending upon the concentration of substrates or products. If the concentration of substrates is more than the concentration of products, the enzyme favors forward reaction.
