If the topology Ω in Problem 2.6 is discrete, then the topology on Y is called a particular point topology or topology of everywhere dense point. The topology in Problem 2.7 is a particular point topology; it is also called the topology of a connected pair of points or Sierpin'ski topology.

Principles of Topology. The topological discussions include open and closed sets, limit points, and so on. The Heine-Borel theorem for closed and bounded intervals, for example, is proved, but without using the word “compact”: the statement in this chapter is that any open cover of a closed and bounded interval contains a finite subcover.
