Then graph the second inequality. Once again, you're going to shade in all sections of the graph that make the inequality true. Most of the time, there will be one area on the graph that you've shaded over twice! This is the solution to the system of inequalities, because it's the section of the graph where both of the inequalities are true.

Graphing Linear Inequalities: $y > mx + b$, etc. Graph the solution to $y < 2x + 3$. Just as for number-line inequalities, my first step is to find the "equals" part. For two-variable linear inequalities, the "equals" part is the graph of the straight line; in this case,...

Solving Inequalities: An Overview (page 1 of 3) Note that the solution to a "less than or equal to" inequality is graphed with a square bracket (or else a closed dot) at the endpoint, indicating that the endpoint is included within the solution. The solution method here is to divide both sides by a positive two.
