A standing wave pattern results in a string, rope or snakey as a result of the interaction between the waves introduced on one end with the reflection of the waves returning from the opposite end. At certain frequencies, a pattern will be established within the medium in which there are positions that always

compression waves (longitudinal waves) hitting our ears. These compression waves are alternating high and low pressure areas. The air molecules vibrate back and forth, but don't move. Speakers imitate sounds by pushing air and causing vibrations. Frequency = Pitch We hear the frequency of sound as pitch. A higher frequency we hear as a higher pitch.

### **shaverphysics.weebly.com**

waves can be forced into boundaries, too. The wave will die out quickly, sound quieter (if a sound wave), and take more energy to produce. Non-Harmonic Wave Driven end Solid Boundary We know that waves move. Yet waves can be trapped between boundaries. These are known as standing waves. A jump rope is a good example of a standing wave.
