Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, there are certain unifying concepts that consolidate it into a single, coherent field. Biology recognizes the cell as the basic unit of life, genes as ...

### **Biology - Wikipedia**

Biodiversity is not evenly distributed, rather it varies greatly across the globe as well as within regions. Among other factors, the diversity of all living things depends on temperature, precipitation, altitude, soils, geography and the presence of other species. The study of the spatial distribution of organisms, species and ecosystems, is the science of biogeography.

1. Introduction. Biodiversity is increasingly recognised as one of the cornerstones of healthy ecosystems (Kremen, 2005, Worm et al., 2006, Duffy et al., 2007, Hector and Bagchi, 2007, Pinto et al., 2014).The loss of biodiversity due to human action has the potential to reduce multitrophic-level interactions (Costanza et al., 1997, Schneiders et al., 2012) and cause trophic cascade ...
