Discrete mathematics deals with objects that come in discrete bundles, e.g., 1 or 2 babies. In contrast, continuous mathematics deals with objects that vary continuously, e.g., 3.42 inches from a wall. Think of digital watches versus analog watches (ones where the second hand loops around continuously without stopping).

A set is an unordered collection of distinct objects. The objects in a set are called the elements, or members, of the set. A set is said to contain its elements. A set can be defined by simply listing its members inside curly braces. For example, the set $\{2,4,17,23\}$ is the same as the set $\{17,4,23,2\}$.
