How to model pad footing or combined footing with strand 7 software? I have tried the plate and brick elements, could not get a good result. With brick elements, how to get soil bearing, shear and moment at certain cross section? Other software like SAFE (FEA software for slab and footing) is very convenient. But i have to use Strand 7 to model.

I assume you have a mesh that has incompatible element edges - something like the attached "Incompatible Mesh" screen shot. You need to do something to match the number of nodes across the incompatible junctions. E.g. use the "Grade Plates and Bricks" tool, and select a row of elements on the "coarse" side of the junction (see "Selected Elements").
