Increasing the temperature of the solution increases its solubility. More solute can be dissolved because the particles are moving faster, which increases the number of collisions between solute and solvent particles. Supersaturated solutions are made by increasing the temperature of the solution. Pressure affects the solubility of gaseous solutes.

Be able to calculate S from K_{sp} or visa versa. Understand how common ions affect solubility and be able to illustrate this effect by calculation.

Solubility Equilibria Review and Questions - KEY

is an unstable condition in which there is more dissolved solute than the solution can theoretically hold. These solutions typically result when the solution is formed at high temperature, at which the solubility is higher, and then allowed to cool slowly. Generally, a slight agitation causes the excess dissolved solute to crystallize.
