In mathematics, Laplace's equation is a second-order partial differential equation named after Pierre-Simon Laplace who first studied its properties. This is often written as $\nabla = +$, where $\nabla \cdot \nabla = +$ is the Laplace operator, $\nabla \cdot \nabla \cdot \nabla = +$ is divergence operator (also symbolized "div"), $\nabla \cdot \nabla \cdot \nabla = +$ is divergence operator (also symbolized "grad"), and (,,) is a twice-differentiable real-valued ...

Laplace's equation - Wikipedia

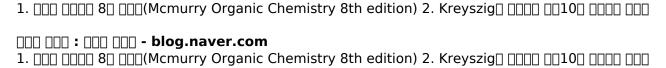

In calculus, the indefinite integral of a given function (i.e., the set of all antiderivatives of the

function) on a connected domain is only defined up to an additive constant, the constant of integration. This constant expresses an ambiguity inherent in the construction of antiderivatives. If a function () is defined on an interval and () is an antiderivative of (), then the set of all ...

Constant of integration - Wikipedia

What are the students who succeeded in this online calculus class say and what advice they offer? Joey from spring 2017. Hey Dr. Goetz, I wanted to personally let you know what I've thought of this class, as it is my first online course: 1.)
