Linear Circuits Analysis. So far we have explored time-independent (resistive) elements that are also linear. A time-independent elements is one for which we can plot an i/v curve. The current is only a function of the voltage, it does not depend on the rate of change of the voltage.

Linear Circuits Analysis - MIT OpenCourseWare
Linear analysis: When the deformations of structures are linear combinations of applied loads, it is called linear. So, purpose of the linear analysis is to identify the transformation and inverse transformation between these two set of quantities. This transformation is called stiffness matrix of the structure.
