In Identifying Outliers and Missing Data we show how to identify missing data using a supplemental data analysis tool provided in the Real Statistics Resource Pack. A simple approach for dealing with missing data is to throw out all the data for any sample missing one or more data elements.

Dealing with Missing Data | Real Statistics Using Excel
Even in a well-designed and controlled study, missing data occurs in almost all research. Missing data can reduce the statistical power of a study and can produce biased estimates, leading to invalid conclusions. This manuscript reviews the problems and types of missing data, along with the ...

Missing Data & How to Deal: An overview of missing data
Missing completely at random. Values in a data set are missing completely at random (MCAR) if the events that lead to any particular data-item being missing are independent both of observable variables and of unobservable parameters of interest, and occur entirely at random. When data are MCAR, the analysis performed on the data is unbiased; however, data are rarely MCAR.

A different issue concerns the mechanisms that lead to missing data, and in particular the question of whether the fact that variables are missing is related to the underlying values of the variables in the data set. Missing-data mechanisms are crucial since the properties of missing-data methods depend very strongly on the nature of the ...
