This identity extends to complex-valued exponents. It can be shown that every continuous, nonzero solution of the functional equation $(+) = ()$ is an exponential function, $: \rightarrow, \mapsto$, with $>$ The fundamental multiplicative identity, along with the definition of the number e as e 1, shows that $= \times \cdots \times \square$ for positive integers n and relates the exponential function to the elementary notion of ...

Computer - History of computing: A computer might be described with deceptive simplicity as "an apparatus that performs routine calculations automatically." Such a definition would owe its deceptiveness to a naive and narrow view of calculation as a strictly mathematical process. In fact, calculation underlies many activities that are not normally thought of as mathematical.
