A square root of x is a number r such that r^2=x. When written in the form x^(1/2) or especially sqrt(x), the square root of x may also be called the radical or surd. The square root is therefore an nth root with n=2. Note that any positive real number has two square roots, one positive and one negative. For example, the square roots of 9 are -3 and +3, since (-3)^2=(+3)^2=9.

You will need probably rounded forms for "real life" answers to word problems, and for graphing. For instance, for the above exercise, it's a lot easier to graph an intercept at x = -0.9 than it is to try to graph the number in square-root form with a "minus" in the middle. But (warning!) in most other cases, you should assume that the answer should be in "exact" form, complete with all the ...
