Solution: Suppose the number has n digits, all k's. If n is even, then $k - k + k - k + ... + k - k = 0$ is divisible by 11, so the number is. If n is odd, then $k - k + k - k + ... - k + k = k$ which is not divisible by 11. So a number whose digits are all the same is divisible by 11 if and only if it has an even number of digits.
