Algebraic topology shouldn't be an afterthought; it should be the main purpose of the first topology course and the first topology book! Assuming that, there are better choices. I'd suggest A First Course in Algebraic Topology (with illustrations on almost every page) and Basic Topology (Undergraduate Texts in Mathematics). The problem I have ...

Description. Two separate, distinct sections (one on general, point set topology, the other on algebraic topology) are each suitable for a one-semester course and are based around the same set of basic, core topics. Optional, independent topics and applications can be studied and developed in depth depending on course needs and preferences.

Section 20: Problem 1 Solution. Sketch the basis elements under when . Assume that is a metric. Show that it induces the usual topology on . The fact that it is a metric follows from the inequality on page 122. Further, based on Theorem 20.3, to show that induces the usual topology on we can show that induces the same topology as .

Topology. The term topology was introduced by Johann Benedict Listing in the 19th century, although it was not until the first decades of the 20th century that the idea of a topological space was developed. By the middle of the 20th century, topology had become a major branch of mathematics.

Topology - Wikipedia

The first observation is that, even if f 1 and f 2 are two different solutions, the level surfaces of f 1 and f 2 must overlap. In fact, the level surfaces for this system are all planes in R 3 of the form x − y + z = C , for C a constant.

Frobenius theorem (differential topology) - Wikipedia

Proof: First show that each basis element for the standard topology is open in the lower-limit topology: (a,b) = ∪{[x,b) | b > x > a}. On the other hand, a basis set [a,b) for the lower limit cannot be a union of basis sets for the Standard topology since any open interval in R containing point a must contain numbers less than a.

This page also credits Euler with creating the concept of topology, using it to solve the Seven Bridges problem. One of these areas is the topology of networks, first developed by Leonhard Euler in 1735. His work in this field was inspired by the following problem: The Seven Bridges of Konigsberg.
