What you're describing are, in fact, the irreducible elements of a ring; those which cannot be expressed as a non-trivial product (a product of two factors being considered trivial if at least one of them is a unit of the ring).. The concept of irreducibility is more generally applicable than the concept of primality, which is restricted to those rings where factorizations into irreducible ...

Over the years, a variety of floating-point representations have been used in computers. In 1985, the IEEE 754 Standard for Floating-Point Arithmetic was established, and since the 1990s, the most commonly encountered representations are those defined by the IEEE.. The speed of floating-point operations, commonly measured in terms of FLOPS, is an important characteristic of a computer system ...

A block cipher is so-called because the scheme encrypts one block of data at a time using the same key on each block. In general, the same plaintext block will always encrypt to the same ciphertext when using the same key in a block cipher whereas the same plaintext will encrypt to different ciphertext in a stream cipher.

Great post. Have a few questions: 1. For WAL, NOSTEAL/FORCE case, you mention no UNDO/REDO is required for crash recovery. I am not sure about that, specifically think about the case where log is written (point 1), then data buffers are being written (points 2, 3, ...) and some where randomly there is a crash between these points.
