Super Resolution From Video

Super-resolution (also spelled as super resolution and superresolution) is a term for a set of methods of upscaling video or images. Terms such as "upscale", "upsize", "up-convert" and "uprez" also describe increase of resolution in either image processing or video editing.

What is super-resolution - Video enhancement software ...

Abstract: Recent advances in video super-resolution have shown that convolutional neural networks combined with motion compensation are able to merge information from multiple low-resolution (LR) frames to generate high-quality images. Current state-of-the-art methods process a batch of LR frames to generate a single high-resolution (HR) frame and run this scheme in a sliding window fashion ...

Video Enhancer can upscale digital videos to any resolution with superb quality: be it 480p to 720p, 720p to 1080p, 480p to 1080p or anything else. Super Resolution is a method to upscale video and images, i.e. increase resolution of a video or picture (terms "upsize", "up-convert" and "uprez" are also widely used).

Video super-resolution (VSR) has become even more im-portant recently to provide high resolution (HR) contents for ultra high definition displays. While many deep learn-ing based VSR methods have been proposed, most of them rely heavily on the accuracy of motion estimation and com-

Spatial Super Resolution (SR) aims to recover fine image details, smaller than a pixel size. Temporal SR aims to recover rapid dynamic events that occur faster than the video frame-rate, and are therefore invisible or seen incorrectly in the video sequence. Previous methods for Space-Time SR combined information from {multiple} video recordings ...

Videos) and is an order of magnitude faster than previous CNN-based methods. 1. Introduction The recovery of a high resolution (HR) image or video from its low resolution (LR) counter part is topic of great interest in digital image processing. This task, referred to as super-resolution (SR), finds direct applications in

Multi-Frame super-resolution (MFSR) is the process of taking multiple low-resolution (LR) video frames and con-structing a single high-resolution (HR) video frame. A so-lution to this problem is a solution to the more general prob-lem of video super-resolution (VSR), which is defined sim-ply as improving the resolution of a given video. It has

Super-resolution imaging (SR) is a class of techniques that enhance the resolution of an imaging system. In some SR techniques—termed optical SR—the diffraction limit of systems is transcended, while in others—geometrical SR—the resolution of digital imaging sensors is enhanced.
